

Amendments to the Specification

Please replace paragraph 0033 of the specification with the following replacement paragraph:

[0033] ~~On~~ One of the primary benefits of the present invention is to provide for reaction of the centrifugal loading principally (and preferably almost entirely) through the interaction of contact between the inner container 34 and the drum 32. This type of support essentially removes all loading ~~form~~ from the bearings that support the container, thus allowing the container to withstand a considerable higher amount of loading than would otherwise be possible.
